

EMISSION & POWER SOLUTIONS SECURES RECORD PURCHASE ORDER FOR Nox SENSOR

LONDON, 13 January 2010

Emission & Power Solutions, Plc (“EPS”, “the Company”), announced today that it has received an initial purchase order for the Company’s NO_x sensor from Amelti Systems AS, a Vestfold, Norway based manufacturer of industrial engine and vehicle fleet monitoring and management systems. The sensors are intended for Amelti’s flagship SmartFeeder model A1G product, an aftermarket product designed to track fuel consumption, additives, exhaust emissions and fleet usage to optimize fuel economy and minimize emissions.

The Company anticipates commencing shipment in mid 2010 and expects to realize some US\$5 million in sales from this purchase order in 2010. Amelti has indicated to the Company that this represents an initial purchase order with additional orders to follow.

EPS CEO Erik Ulsteen commented, “This is the first significant purchase order for our sensor in commercial quantities. We anticipate that Amelti’s adoption of our technology will result in wider recognition of our product’s capabilities.”

Amelti CEO Roger Kronborg added, “I have great confidence in the EPS sensor and am confident that its inclusion as part of our SmartFeeder line will greatly enhance value to our clients. The EPS NO_x sensor is the only sensor in the market that offers selective detection of gasses, which gives it a significant competitive advantage.”

About EPS:

EPS is a “clean tech” company that licenses, acquires, develops, deploys, and transfers technologies dedicated to improving fuel economy while also reducing environmentally harmful exhaust emissions. Using advanced fuel treatment devices, EPS has developed a proprietary multi-phase process utilizing engineered flow patterns in order to restructure fuel hydrocarbons. This increases fuel efficiency and produces a cleaner burn during the engine’s combustion cycle. EPS has a portfolio of technologies in production and development and continues to expand its patented product line.

EPS’ primary product is the FX Reactor In Line Device that reduces fuel consumption, increases horsepower, and significantly reduces emissions. The FX Reactor is an aftermarket apparatus that can be added directly into the fuel line of any diesel engine. EPS is also developing a Potentiometric Sensor that selectively detects and measures combustion gases, allowing for a further reduction in emissions and improved fuel efficiency. The third technology EPS is developing is an On Board Distillation System that vaporizes fuel in order to produce a cleaner engine start and reduce total hydrocarbon emissions.

EPS is a publicly listed company that trades on the Deutsche Börse under symbol EPI.
