

Emission & Power Solutions Announces High Sense Technologies Ab To Purchase 500 Fx Reactors

London, 15 February 2010

[Emission & Power Solutions, Plc](#) (Frankfurt Exchange Ticker Symbol: [EPI](#)), a clean tech company that licenses, acquires, develops, deploys, and transfers technologies dedicated to improving fuel economy while also reducing environmentally harmful exhaust emissions, announced today that High Sense Technologies AB (“HST”) placed an order for 500 FX Reactors for new customers in Norway and Sweden. One customer operates a public mass transit system and the other customers are divisions of U.S. companies in Scandinavia.

Hans Kristian Finstad, CEO of HST stated “I am pleased with the response from HST’s customers in Scandinavia regarding the launch of the FX Reactor. We look forward to introducing additional customers to the benefits of the product.”

Erik Ulsteen, CEO & Chairman of EPS stated, “Despite having worked with HST for less than a month, we have received a significant amount of interest from their customers regarding our FX Reactor. We are highly encouraged that customer interest has turned into purchase orders.”

About EPS:

EPS is a “clean tech” company that licenses, acquires, develops, deploys, and transfers technologies dedicated to improving fuel economy while also reducing environmentally harmful exhaust emissions. Using advanced fuel treatment devices, EPS has developed a proprietary multi-phase process utilizing engineered flow patterns in order to restructure fuel hydrocarbons. This increases fuel efficiency and produces a cleaner burn during the engine’s combustion cycle. EPS has a portfolio of technologies in production and development and continues to expand its patented product line.

EPS’ primary product is the FX Reactor In Line Device that reduces fuel consumption, increases horsepower, and significantly reduces emissions. The FX Reactor is an aftermarket apparatus that can be added directly into the fuel line of any diesel engine. EPS is also developing a Potentiometric Sensor that selectively detects and measures combustion gases, allowing for a further reduction in emissions and improved fuel efficiency. The third technology EPS is developing is an On Board Distillation System that vaporizes fuel in order to produce a cleaner engine start and reduce total hydrocarbon emissions.

EPS is a publicly listed company that trades on the Deutsche Börse under symbol EPI.
