To whom it may concern,

Scott Construction Equipment LaVergne, TN made the decision in the fall of 2008 to purchase the FuelFX product to add to our service vehicles. We based our decision on the information provided by Bob. He offered us a 30 day trial period, but we felt confident in what he had told us to go ahead with the purchase.

Bob said his product would provide at least a 5% reduction in fuel consumption. Our service department runs six 2009 International 4300 service body trucks. They have the DT466 engine with exhaust regeneration system. We figured to break even in 6 to 8 months.

We installed the FuelFX on two of our service trucks. The installation was very easy. It took about 30 – 45 minutes. Our trucks are equipped to tell us instant MPG. The first truck we installed it on the operator reported instant MPG gain of 1 MPG.

Overall between the two trucks we are averaging a 15% reduction in fuel consumption which equates to \$0.08 per mile. At this pace we will break even in 6 months.

We are extremely satisfied in both the product and the support and would highly recommend them.

Thank you,

Jim Hoyle

Service Manager
