Dear Norm,

We wanted to take the time to write to you about the fantastic results we have been experiencing with the Fuel FX reactor. This has got to be one of the greatest inventions of all time! As you know we drive a fleet of 25 International Navistar 2000 trucks. Since the installation of the reactors we have seen an average MPG improvement of 39.6% on our fleet. We are ecstatic!

The drivers love the increased horsepower and performance. The owners really enjoy the added income to our bottom line. We are estimating that our annual savings on fuel this year will be almost \$90,000. In an industry where slim margins are the norm, this is a substantial amount of money. Even more amazing is the fact that the units pay for themselves in months, not years.

We are also very pleased with the quality of the equipment and the installation. We have not had any trouble from any of the units. We are very excited about this wonderful invention and look forward to many years of reliable service from our units. If we may serve as a reference please do not hesitate to call on us. We will give Fuel FX a positive review with great pleasure.

Sincerely,

A handwritten signature in cursive script that reads "Javier Bueno".
